Work Experience:

Amazon - Software Development Engineer

July 2023 - Present

- **Amazon Financial Tech Organization**
 - Owned technical execution and full lifecycle management for 3P seller financial event infrastructure: fee configuration, ingestion, accounting and balance calculation across a Tier-2 platform processing \$550B+ in annual transaction volume.
- **Financial Ingestion and Fee Tenant Experience Team:** Entry point for all financially significant events in Amazon's 3P seller ecosystem, ingestion, orchestration, aggregation, schema validation, and downstream distribution to accounting, balance, and payment platforms (3.5B+ daily requests). Built and owned the Seller Fee configuration store: a full-stack application managing \$25B+ in annual fee changes, releases, approvals, and testing workflows, serving as the knowledge base for Execution Services (2.5B+ daily requests).
- **Configuration Dry Run Testing:** Designed and built an automated dry-run testing framework using AWS Step Functions, Lambda, and DynamoDB, enabling isolated sandbox testing of tenant fee configurations that eliminated production deployment risks across core Execution platforms.
- **Platform Migration:** Migrated all Shipment events (30% of total traffic) worldwide from legacy bespoke processing onto a standardized framework. The standardized framework reduces per-event onboarding from 12+ weeks to 3 weeks with 92-98% less code. Developed retroactive correction capabilities on financial events up to 10 years old.
- **AI Agent Development:** Built an autonomous code review agent that validates configuration changes against live service state and posts structured review comments. Also authored an AI agent skill that automates discovery and correction of legacy financial events across three realms, turning multi-hour manual testing into a single command.
- **FBA Pan-Europe Oversized Surcharge (Details):** Spearheaded the design and delivery of DSL Configuration and Seller Central tool updates for the FBA Pan-Europe Oversized Surcharge initiative; served as the sole North American developer coordinating across global PM and engineering teams to drive +\$23M USD in annualized revenue.
- **Seller Fees LLM Slack Bot:** Built a GenAI-powered Slack bot for Seller Fees Q&A with a team of three engineers. Winner of the Seller Fees Hackathon (20+ projects) and Top 10 at the Fulfillment by Amazon GenAI Fair (40+ projects). Leveraged AWS (API Gateway, Lambda, S3, Bedrock Agent).
- **Technologies:** Java, Spring, Angular, AWS, Domain Specific Languages (DSL)

Amazon - Software Development Engineer Intern

May 2022 - August 2022

- Designed and built a scalable, reusable email service for Automated Vendor Negotiations, serving 600K+ users and handling 45K+ emails monthly with delivery, click, and rejection tracking.
- **Technologies:** Java, Angular, Express, AWS (Lambda, DynamoDB, CloudFormation, CloudWatch)

Arcurve - Software Developer Intern

May 2021 - April 2022

- Developed production features and automated tests for a full-stack web app (AngularJS, C#, Azure) used by Fortune 500 clients to track and forecast gas delivery data.
- **Technologies:** Angular, TypeScript, Bootstrap, C#, Azure, SQL, CosmosDB, ASP.NET, Selenium UI

Projects:

Portfolio Website: nick9lee.github.io

r/Piazza

- Built a distributed collaborative art canvas (r/place clone) with replicated databases, fault tolerance, and consistency guarantees using timestamps and vector locks. (React, Node.js, MongoDB, AWS EC2, Socket.io, Nginx)

3D EEG Realtime Data Visualizer - NeuroNexus Hackathon - (60 days)

- Developed a Real-time 3D visualization of dynamic brain networks from EEG data using JavaScript and three.js.

Languages: Java, C#, Python, Swift, C++, JavaScript/TypeScript, SQL, HTML/CSS

Technologies: AWS, Azure, Angular, ASP.NET, MongoDB, Apache Spark, Selenium, Git, Hadoop, iOS

Education:

University of Calgary

May 2023

Bachelor of Science in Software Engineering - Graduated with distinction

Relevant Coursework: DSA, OOP, Software Testing, Databases, Distributed Systems, Data Science, Big Data

Volunteer Work: RoboGals Student Mentor (2022–2023), Calgary Active Habit Association Head Soccer Coach (2017–2019)
